Introduction

What is PIMS?

ISO/IEC 27701 standard is published in August 2019, and it is the first international standard that deals with privacy information management. The standard will assist organizations to establish, maintain and continually improve a Privacy Information Management System (PIMS) by enhancing the existing ISMS, based on the requirements of the ISO/IEC 27001 and guidance of ISO/IEC 27002. It can be used by all types of organizations irrespective of their size, complexity or the country they operate.

ISOLTX and PIMS

The 25th May 2018, the General Data Protection Regulation (GDPR), a legal framework that sets guidelines for the collection and processing of personal information from individuals who live in the European Union (EU), came into effect globally. Many companies were under pressure to drive compliance in this regard. Any many companies did this on a paper exercise and left it there. No health checks, no proactive measurements, just the minimum requirements for GDPR compliance.

Then the PIMS (ISO 27701) was published and companies can be certified against this standard to ensure that they can compete in the global environment and use the PIMS as their Unique Value Proposition (UVP).

The question is, how do you continuously monitor, measure, analyse and evaluate the PIMS? If you don't have a future proof system, which can be extended to provide this type of Assurance, you will be surprised by a directive or a fine from the GDPR and other privacy regulations Globally.

ISOLTX-PIMS™ has been configured with the PIMS incorporated in the futuristic modular approach.

Can your current system measure the PIMS?

Any compliance department or IT department, where the Information Officer has been appointed, are sitting on a time bomb if you cannot measure the health of your PIMS.

ISOLTX-PIMS™ has a unique offering in this regard. This software can not only measure your PIMS health over the length and breath of the entity, you can also log incidents and investigations on the ISOLTX-I²MAS™ and obtain risk ratings which is integrated into your overall combined assurance model.

PIMS Risk Bearing Capacity (RBC)

What is the PIMS RBC? Did you conduct the risk assessment in this regard and your company's RBC? What is your companies Appetite and Tolerance in terms of the RBC? Do you know how to calculate the RBC on a model suitable, adequate, relevant, effective and efficient to your specific environment?

If you have answered one of these questions with a No, you need to contact the ISOLTX-PIMS™ team. Our RBC methodology is based on the global best practices and with a view data collection inputs, the ISOLTX-PIMS™ system, can calculate your PIMS RBC.

The Way forward:

ISOLTX-PIMS™ drives **Performance and Certainty**. ISOLTX-PIMS™ software has been developed by two industry leading partners, specialising in internationally recognised and accredited [Training](#), [Advisory Services](#) and [Management System Certification \(MSC\)](#) entity specialising in Management Systems, whether ISO (Internationally), to King IV or Sorbian Oxley (SOX). The second party is a leading University with all the R&D and technical skills needed to build and configure your specific needs.
