Introduction

Maturity Modelling is a Combined Assurance function to scientifically measure the relevancy, suitability, adequacy, effectiveness and efficiency of management system. This is usually conducted on one discipline, whether

- ISO 31000 / Enterprise Risk Management,
- ISO 22301: Business Continuity Management,
- ISO 9001: Quality Management,
- ISO 45001: Occupational Health and Safety Management, etc.

This is usually a very intense process, just like an audit, with the objective to determine the state of the management system or is the management system in a state.

Customisation of Maturity Modelling

The ISOTX-MM™ team has seen over the past 15 years that entities wants to conduct a maturity assessment on a management system, in the absence of the entity having adopted a maturity model by the Board.

In the absence of the structures, systematic and agreed upon maturity model, per management system, the contracted party will divert to their default setting and utilise a generic Maturity Model, based on a specific management system. This is a wrong practice to follow, as this allows the contracted party to determine the requirements

for the specific entity, whether they are a regulator or a just a normal company, they will be measured against the same criteria.

The result of the Maturity Model conducted will be binding on the entity and the Board and action plans shall be developed to address the shortcomings, to drive maturity.

The question here is, was the Maturity Model used, correctly designed to measure your own uniqueness? In most cases not, thus the journey you will be placed upon, will take you through various other routes, than to have a GPS system and determine the shortest and most effective route to maturity improvement.

ISOLTX and Maturity Modelling

ISOLTX-MM™ is a build in functionality within the system. Whether you are using the ISOLTX for

- Enterprise Risk Management (ERM),
- Business Continuity Management (BCM),
- Environmental Management (EM),
- or any other recognised management system.

ISOLTX-MM™ conducts continuous maturity modelling measurement and can provide you with real time data and behavioural aspects of the management of these systems. You don't need an outsider, with a generic maturity model, to come and assess you as a dipstick exercise and make strategic decisions based on this.

Future Proof your SLA Management with ISOLTX-MM™

The ISOLTX-MM™ software has proven to be a unique service offering to our client globally. With the ISOLTX-MM™ software we created a future proof software which will grow with your company, whether vertically or laterally. The Maturity Management is specifically configured to ensure that every requirement of a management system is documented, analysed and configured to measure the drive the maturity and to detect early warnings within Management system health.

With the integration of ISOLTX-MM™ Artificial Intelligence (AI) and Machine Learning (ML) functionalities, supported by a full Research and Development team, **ISOLTX is not a software, we are an essential Business partner.**

The Way forward:

ISOLTX-MM™ drives **Performance and Certainty**. ISOLTX-MM™ software has been developed by two (2) industry leading partners, specialising in internationally recognised and accredited [Training](#), [Advisory Services](#) and [Management System Certification \(MSC\)](#) entity specialising in Management Systems, whether ISO (Internationally), to King IV or Sorbian Oxley (SOX). The second party is a leading University with all the R&D and technical skills needed to build and configure your specific needs.

ISOLTX-MM™ is part of the CAA offerings as a [Platinum Accredited Partner](#) of the Professional Evaluation and Certification Board (PECB), based in Canada, under licence of the International Accreditation Service (IAS) (California). This Elite status and accreditation represent the professionalism CAA addresses every assignment.

We provide all the various end to end services to drive business, which includes a variety of [Management System Toolkits](#), specifically designed for each standard.
